The Bayley Scales of Infant and Toddler Development (BSID) are recognized internationally as one of the most comprehensive tools to assess the development of infants and toddlers from 1 to 42 months. The current version, BSID III, published by Psychological Corporation, has three components: a mental scale, a motor scale, and an infant behavior profile. These scales are widely used in the assessment of infants and toddlers, as well as in the evaluation of very preterm, very low birth weight children. In clinical populations, the Bayley Scales of Infant and Toddler Development (BSID) underestimate delay. This study explores developmental quotient scores as an alternative to composite scores for these children.
The Bayley Scales of Infant Development (BSID) measure the mental and motor development and test the behavior of infants from one to 42 months of age. The BSID II were developed by Nancy Bayley and published by Psychological Corp in 1993. BSID III is the current version and is a standard series of measurements used primarily to assess the motor fine and gross language receptive and expressive and cognitive development of infants and toddlers ages.
